approaches

S^{4 1/2} - very professional + workmanlike + intelligent
in how it's all put together engineered, constructed,
organized, etc.

S^{4 1/2} - technology or advanced; very sophisticated in
its approach: "lite" few of principles employed
are new or innovative, but the utilization,
synthesizing, continuities of equipment +
principles, through a [local development] a
projector of former factory, is still very
advanced + expand greatly the capabilities,
operating parameters and use of the system
involved.

5412 "Zones" of involvement. One "zone" (not necessarily physically defined) comprises all things directly relates or supports the "new left" or "operators center". Outside that (figuratively) there are other agencies or groups or organizations that are there to provide some sort of support for the main puppys of the installation, but which are not directly connected. A sense of cold-bloodedness, calculated calculations or cynical connectedness of outside "zones" of involvement

3 1/2 - military involvement at site - but
"like" joint services operators - such as DIA &
NSA is a combo of various military
branches + disciplines plus Gov. & civilians --

Approved For Release 2000/08/08 : CIA-RDP96-00789R000300110002-5

One structure, one previously described showing me, has been referred to as "Open Center" or "nerve center"; involves sophisticated, likely, defense-related concept; the idea of an abstract "barrier", "trip wire", "shield", envelope; the organization & which is complex, intricately layered, overlapping, layered, & interlocked. There are other sites, perhaps similar or not connected with it, but at great distances away. Impression of very professional & intelligent engineers/construction/organizations involved. Though technology involved is not revolutionary or innovative! that may be used, combined w/ principles results in dramatically ~~improved~~^{enhanced} capabilities & usefulness. System is automatic, greatly reducing requires personnel.

There seem to be roughly 5, all "zones" of involvement, those are those people & agencies directly connected w/ the open ctr. & its sys.; "outside" of that are people & agencies who are in sys. also but further removed. These people are cold-blooded, cynical, calculating.

West of open ctr. is a cluster or group of structures, involving some sort of rounded concept, as well as angular. A lot of open space is involved.

One yr. ahead, a sense of "protectionism" + competition + "empire" protection is observed; as well as the sense of an "Institutional" is a relevant concept here.

18

Approved For Release 2000/08/08 : CIA-RDP96-00789R000300110002-5

Cluster of structures not interconnected

w/ hardware - i.e. missiles, ~~gases~~, or other such
project type things. People involved present the
air of unite + teamwork, + sense of mission --
"pure" their project is all its meant to be.

Site involves military in a "joint service"
sense - various branches + disciplines together
w/ many civilian specialists + managers.
